

React Forms

React forms DB

forms_submission_value must have unique (submission_id, attribute).
otherwise, in multi-step forms, when returning from the next step, the values will be re-entered and not overwritten.

```
ALTER TABLE forms_submission_value  
ADD UNIQUE KEY uniq_submission_attribute (submission_id, attribute);
```

If there are duplicities remove them:

```
DELETE f (or SELECT * for test)  
FROM forms_submission_value f  
JOIN (  
  SELECT MAX(id) AS keep_id, submission_id, attribute  
  FROM forms_submission_value  
  GROUP BY submission_id, attribute  
  HAVING COUNT(*) > 1  
) x  
ON f.submission_id = x.submission_id  
AND f.attribute = x.attribute  
WHERE f.id < x.keep_id;
```
