

# CEBIN Applications

## Json editor

### TODO:

- Add server-side input validation where needed.
- Limit the raw JSON import ability to trusted admins.  
If you need, I can add HTTP basic auth or integrate a simple login.
- Add basic HTTP auth to the single file.
- Convert to a two-file system (API endpoint + React frontend).
- Add image uploads and insert links into the HTML content.
- Harden security (rate-limit, stricter CSRF/session handling).
