

Luya Framework

Luya Errorapi

1. nainstalovat modul

composer require --ignore-platform-req=php luyadev/luya-module-errorapi

2. ./vendor/bin/luya migrate

3. ./vendor/bin/luya import

4. config

<https://it-tools.tech/token-generator>

```
'modules' => [  
    // ...  
    'errorapi' => [  
        'class' => 'luya\errorapi\Module',  
        'adapters' => [  
            [  
                'class' => 'luya\errorapi\adapters\MailAdapter',  
                'recipient' => ['errors@example.com'],  
            ],  
            [  
                'class' => 'luya\errorapi\adapters\SlackAdapter',  
                'token' => 'xyz.xyz.xyz.xyz',  
            ],  
            [  
                'class' => 'luya\errorapi\adapters\SentryAdapter',  
                'token' => 'YOUR_SENTRY_USER_AUTH_TOKEN',  
                'organisation' => 'organisationslug',  
                'team' => 'teamslug',  
            ],  
        ],  
    ],  
],  
]
```

```
'components' => [  

```

Luya Framework

```
// ...

'errorHandler' => [

    'api' => 'https://example.com/errorapi',
    // where example is the domain you have setup error api above

    'transferException' => true,

],

]
```
