

Luya Framework

Luya Deployment

How to Run Tests

```
./vendor/bin/phpunit
```

Check Coding Standard

In project is used PSR2 Standard

Check coding Standard

```
vendor/bin/phpcs --standard=PSR2 assets/ configs/ messages/ migrations/ modules/ views/ tests/
```

Repair bugs in coding Standard

```
vendor/bin/phpcbf --standard=PSR2 assets/ configs/ messages/ migrations/ modules/ views/ tests/
```

Run application in docker locally

```
docker build -t famu . docker run --name=famu -v /srv/http/famu:/var/www/app -p 127.0.0.1:80:80 --network=php-dev -d famu * Replace /srv/http/famu with path of app on your computer *  
Replace php-dev with name of network where running db container
```

Revert application after deployment

```
dep revert prep dep revert prod
```
